

TECH TALK

"Data Capture on the Factory Floor"

Rochestown Park Hotel, Cork
Wednesday, 29th April 2015, 19.30

In this presentation **Robert Jones – Vision ID** will discuss a seamless work environment by connecting employees with accurate information, and empowering them to do their best. Whether on the production line, in the warehouse or at the dock-door, better data means fewer errors and lower costs. From the second raw materials are received, to the moment finished goods are shipped, data capture solutions improves quality & compliance, reducing efficiencies & errors.

By combining handheld computers, tablets, barcode scanners, RFID technologies, vision systems, label printers and Wireless LAN technologies - enables track and trace by lot or batch, all parts used in the manufacturing process to ensure traceability across the supply chain. Where testing, tracking, recording, documentation, production, or packaging takes place, data capture solutions provide the control and accuracy that industry demands.

About Robert Jones and VisionID

VisionID is a 100% Irish owned company that specialises in the provision of Traceability and Mobile Enablement Solutions. Established in 2000, VisionID is a leading provider of barcode traceability solutions, software and professional services. VisionID enable clients to capture and process information in real time. VisionID specialises in innovative

technologies including RFID and rugged mobile computing to automate process across organisations. VisionID is a premier partners of both Zebra Technologies and Motorola Solutions – traditionally used for Data Capture Solutions within the Life Sciences and Manufacturing Sectors. Robert Jones has over 21 years' experience of working in the AutoID industry, concentrating on Barcoding, Mobile Computing and Radio Frequency Identification (RFID). Of these 21 years, Robert started and managed **VisionID** for the last 15 years.
